

Linux/Unix Command Line and VIM editor
Due 11:59pm Sunday January 24th, 2016

Part I

Linux is a Unix-like operating system and in this part of the assignment we'll review a few basic commands for navigating through the file system via the command line. You will find these same commands on any Unix based system including Mac OS X. On a lab computer open a terminal and follow along and complete the steps in *Linux-Unix Quick Start*.

Part II

Follow the instructions in the `activity.txt` you found during Part I to complete the assignment.
